To,

The Hiring Team

**Subject: Application for DevOps**

Dear Hiring Manager,

I am writing to express my enthusiastic interest in joining your engineering team as a DevOps . With a robust technical background encompassing multi-cloud administration, automated CI/CD deployment pipelines, and modern container infrastructure, I am confident in my ability to enhance your continuous delivery lifecycles and reinforce system reliability.

In my current role at Joules to Watts, I specialize in architecting and supporting end-to-end continuous integration and deployment workflows. I actively build and optimize Jenkins pipelines integrated with repository webhooks to seamlessly drive automated compilation, unit testing, and deployment stages. My core hands-on strengths include configuring static code analysis via SonarQube, containerizing microservices with Docker, and provisioning repeatable infrastructure-as-code (IaC) utilizing Terraform across both AWS and Azure platforms. Furthermore, I bring extensive experience monitoring production-level environments by creating localized alerting frameworks and aggregating system logs via AWS Cloud Watch and Azure Monitor.

What uniquely positions me to drive efficiency on your team is my proactive methodology toward developer productivity and operational speed. Alongside traditional DevOps workflows, I actively integrate generative AI capabilities (such as GitHub Copilot and Gemini) and low-code orchestrations (like n8n and Power Automate) to automate mundane administrative tasks, optimize scripts, and drastically lower response times for infrastructure events. Combined with my past enterprise IT infrastructure experience handling platform compliance, system rollouts, and hardware troubleshooting at Newwave Computing, I understand how to maintain stable operations without stalling engineering velocity.

I am highly motivated to bring this balance of technical implementation and innovative automation to the company.

I am eager to learn more about your ongoing cloud initiatives and discuss how my skills can contribute directly to your team's upcoming deployment goals.

Thank you for your time, consideration, and review of my application.  
Sincerely,

**Guru Prasad K**
